

TWO-SIDED ROLL SUPPORT WITH MULTIPLE RIBS

**ABSTRACT OF THE DISCLOSURE**

A support structure is provided for supporting a plurality of cylindrical objects. The support structure includes an elongated member having first and second sides and first and second edges. First and second rib sections extend from the first side of the elongated member. The rib sections are generally parallel to each other and are spaced from corresponding edges of the elongated member. Each rib section includes an alternating series of arches and depressions.
